How much does a battery cost in 2023?

The figures represent an average across multiple battery end-uses, including different types of electric vehicles, buses and stationary storage projects. For battery electric vehicle (BEV) packs, prices were \$128/kWh on a volume-weighted average basis in 2023. At the cell level, average prices for BEVs were just \$89/kWh.

Will battery pack prices drop again next year?

Given this, BNEF expects average battery pack prices to drop again next year, reaching \$133/kWh (in real 2023 dollars). Technological innovation and manufacturing improvement should drive further declines in battery pack prices in the coming years, to \$113/kWh in 2025 and \$80/kWh in 2030.

Why are battery prices so high in China?

There was also intense price competition domestically in China this year as battery manufacturers ramped up production capacity aiming to grab a share of the growing battery demand. The industry continues to switch to the low-cost cathode chemistry known as lithium iron phosphate (LFP).

Will Lithium prices remain high in 2022?

Lithium prices reached a high point at the end of 2022, but fears that prices would remain high have largely subsided since then and prices are now falling again. Evelina Stoikou, energy storage senior associate at BNEF and lead author of the report, said: "It is another year where battery prices closely followed raw material prices.

How much does lithium iron phosphate cost?

The industry continues to switch to the low-cost cathode chemistry known as lithium iron phosphate (LFP). These packs and cells had the lowest global weighted-average prices, at \$130/kWh and \$95/kWh, respectively. This is the first year that BNEF's analysis found LFP average cell prices falling below \$100/kWh.

How much does a battery electric vehicle cost in 2023?

For battery electric vehicle (BEV) packs, prices were \$128/kWh on a volume-weighted average basis in 2023. At the cell level, average prices for BEVs were just \$89/kWh. This indicates that on average, cells account for 78% of the total pack price. Over the last four years, the cell-to-pack cost ratio has risen from the traditional 70:30 split.
