What is a solar photovoltaic (PV) panel?

A solar photovoltaic (PV) panel is a device that can convert solar energy directly to electricity. However, thermal energy accumulating in PV panels inevitably results in the increase of its temperature, leading to the decrease of PV's efficiency, which is already low. Combining PV panel with the hot side of TEG could enhance the PV's power output.

What is a 150W 12V solar panel?

The 150W 12V Solar Panel from Camec uses mono-crystalline technology to generate maximum current from toughened-glass covered panels. More info.

What is a low voltage solar cell?

Low voltage solar cells are ideal for OEM, project development, hobbyists and school or university projects. There are rigid and flexible mini solar cells ranging from 0.5V to 15V, from Powerfilm and Inprosolar (we are distributors for both). The lowest voltages tend to be small rigid cells, ranging from 0.5V to 1.5V.

What types of solar cells are available?

We also have small solar cells with integral stands and pin or screw terminals that at 2-9V are perfect for use in schools and universities. The flexible cells are larger and cover 3V, 7.2V and 15V; some of these are weatherproof and there is a special self-adhesive panel for remote controlled aircraft.

What are the different types of mini solar cells?

There are rigid and flexible mini solar cells ranging from 0.5V to 15V, from Powerfilm and Inprosolar (we are distributors for both). The lowest voltages tend to be small rigid cells, ranging from 0.5V to 1.5V. These are encapsulated in epoxy and include positive and negative cables.
