What is the optimum design of ground-mounted PV power plants?

A new methodology for an optimum design of ground-mounted PV power plants. The 3V × 8 configuration is the best option in relation to the total energy captured. The proposed solution increases the energy a 32% in relation to the current one. The 3V × 8 configuration is the cheapest one.

Does a ground-mounted photovoltaic power plant have a fixed tilt angle?

A ground-mounted photovoltaic power plant comprises a large number of components such as: photovoltaic modules, mounting systems, inverters, power transformer. Therefore its optimization may have different approaches. In this paper, the mounting system with a fixed tilt angle has been studied.

What types of mounting systems can be used for PV power plants?

Several mounting systems can be used for PV power plants, including fixed-tilt support structures, single- or double-axis tracking structures, marine-grade support structures, and more.

How to design a large-scale PV power plant?

Designing a large-scale PV power plant requires careful planning and selection of location. The site must be chosen to avoid shading from buildings, trees, or other obstructions.

What is a large-scale solar PV plant?

Solar PV plants whose capacities range from (MW) to (MW) are considered to be large-scale plants and they require a surface that exceeds (km) . A large-scale plant comprises: modules, mounting system, inverters, transformation centre, cables, electrical protection systems, measurement equipments and system monitoring.

What was the total solar plant installation by the end of 2019?

By the end of 2019, a total of 634 GW solar plants had been installed. Due to the increasing number of photovoltaic (PV) plant installations, there is a higher demand for feasibility studies and detailed designs of large-scale PV power plants (LS-PVPPs).

stations and have not yet been fully adapted to the specific characteristics of RE projects. Moreover, there is lack of harmonization and standardization of the administrative processes at the national and local levels, which create further risks of non-compliance

In today's photovoltaic (PV) power plants, traditional crystalline PV modules are the prevalent technology, which is highly susceptible to partial shading due to the risk of irreversible damage.
