How many volts does a solar panel produce?

Open circuit 20.88V voltage is the voltage that comes directly from the 36-cell solar panel. When we are asking how many volts do solar panels produce, we usually have this voltage in mind. For maximum power voltage (V_{mp}), you can read a good explanation of what it is on the PV Education website.

How many volts is a 36 cell solar panel?

36-Cell Solar Panel Output Voltage = $36 \times 0.58V = 20.88V$ What is especially confusing, however, is that this 36-cell solar panel will usually have a nominal voltage rating of 12V. Despite the output voltage being 18.56 volts, we still consider this a 12-volt solar panel.
