In this paper, improved firefly algorithm (FA) is applied to determine the optimum switching angles for the 11- level cascaded H bridge multilevel inverter (MLI) with adjustable DC sources in order to eliminate pre specified lower order harmonics and to achieve the desired fundamental voltage.

Adjustable speed drive system is the most correct and commonly accepted description. Most ASD units consist of three basic parts: rectifier, inverter, and controls. A rectifier, also known as a converter, changes the fixed frequency ac input voltage to dc. The inverter switches the rectified dc voltage to an adjustable frequency ac output voltage.

This paper proposes and analyses a 5-level inverter topology with a single DC source and a buck DC-DC converter in order to reduce the number of independent DC voltage sources. In the proposed topology, the specific input DC voltage is supplied through a single DC and a single-input single-output DC-DC converter.
