However, these supercapacitors can have problems with quality, particularly with the thicknesses of coatings. As the supercapacitor is electrostatic, small differences in thickness of the coatings can make a big difference in energy capacity and reliability. The potential for dry-electrode technology is significant though.

A supercapacitor's lifetime spans 10 to 20 years, and the capacity might reduce from 100% to 80% after 10 or so years. Thanks to their low equivalent series resistance (ESR), supercapacitors provide high power density and high load currents to achieve almost instant charge in seconds.

Large supercapacitors are electrochemical devices with high capacitance. They store and release large electrical charges compared to traditional capacitors. Thanks to the above ...
