

Burundi sells mobile outdoor power

How will new power plants affect Burundi?

New hydroelectric power stations at Jiji and Mulembwe with a total capacity of 48 MW are under construction. These new power plants will double Burundi's production capacity, which is currently 39 MW. They will also increase the national electrification rate from 5% to 8% and help to bridge the energy deficit.

Why is Burundi launching a power generation master plan?

The project aims to support the development of a power generation master plan expected to highlight the various renewable energy options for Burundi in the 'power generation segment', paving the way for strong private sector participation which is critical for meeting the massive challenges of the power sector in the country.

Does Burundi have electricity?

Burundi's access to electricity (6%) is one of the lowest in Sub-Saharan Africa, even though the country's cost of generation (0.062 USD/kWh) is considered relatively low as compared to its neighboring countries.

How much power does Burundi have?

Furthermore, Burundi has only 39 MW of installed capacity, of which 95% is hydropower-based, and significant renewable energy potential still to be tapped.

How is Burundi reforestation affecting the environment?

As part of the National Reforestation Program, Burundi has committed to increasing carbon dioxide sinks by reforesting 4000 hectares per year for 15 years from 2016 (8000 ha/year). In the energy sector, Burundi is building three hydroelectric power stations. This program will bring the electrification rate to 30%.

What are the main sources of energy in Burundi?

Ranked in order of importance, the main sources of energy consumed in Burundi are: biomass (wood), petroleum products, electricity from hydropower sources and peat. About 98% of the Burundian population, both urban and rural, use wood and charcoal as an energy source, mainly for heating and cooking.
