During the presentation of the project, Cape Verde's National Director for Industry, Trade and Energy, Rito Évora, announced that the energy storage centre is scheduled to be operational ...

In the context of the ongoing energy transition, holistic perspectives are required to transcend the, sometimes myopic, electrical domain focus in favour of integrated energy systems (IES) by considering sector coupling [1]. The increasing interest in decarbonizing global energy sectors such as transport leads to an increasing electrification posing both challenges and ...

In 2012 Cape Verde had an installed electricity generation capacity of around 300 MW, of which about 24% from wind power plants and 3% from photovoltaic stations. While solar power has an enormous potential as a source of renewable energy, natural conditions in Cape Verde are one of the best in the world for the production on wind energy.
