The projections are supported by the fact that South Africa has a plentiful supply of cheap coal which assures a low-cost fuel source for electricity generation. Furthermore, South Africa's thermal power generation will likely fall to 188.0 TWh in 2032 from an estimated 200.1 TWh in 2023 according to BMI projections.

The generation of power represents about 15% of the country's gross domestic product and Eskom is classified as a strategic water user. It's a level of importance reflected in the many schemes developed over the years to transfer water among catchment areas to supply power plants. Power generation accounts for a modest 2% of South Africa's
