How can a high energy storage system be associated with auxiliary energy storage?

To associate a high energy storage system, such as a Li-ion battery, with an auxiliary energy storage system, such as supercapacitors in the same dc-bus, several configurations are proposed in literature (Kohler et al. 2009; Camara et al. 2012).

Do energy management strategies reduce battery power stresses?

The obtained results show, for the same driving cycle of electrical vehicle (EV range, maximum acceleration, and energy recovery), and for the same size of the hybrid storage system (optimal size), the use of developed energy management strategies allows reducing the battery power stresses.

Is battery power limitation a novel approach to energy management?

Proceeding from a conventional strategy of the battery power limitation, we develop a novel approach of energy management based on the decreasing of power stresses applied to the Li-ion battery in hybrid energy storage system for use in electric vehicle applications.

What is the energy management strategy for hybrid storage systems?

In the case of the hybrid storage system, the energy management strategy allows dividing the mission power between the two storage technologies (battery and supercapacitors) (Camara et al. 2010; Hu et al. 2017). The power mission is computed using the speed mission.

Are lithium-ion batteries a promising electrochemical energy storage device?

Batteries (in particular, lithium-ion batteries), supercapacitors, and battery-supercapacitor hybrid devices are promising electrochemical energy storage devices. This review highlights recent progress in the development of lithium-ion batteries, supercapacitors, and battery-supercapacitor hybrid devices.

What is energy management strategy for Li-ion batteries?

In particular, the developed energy management strategy (EMS4/S4), which gives a lowest RMS battery power compared to the other methods. As a result, the decreasing of the power stresses applied to the Li-ion battery via the energy management strategies improves the HESS lifetime and reduces its global cost.
