

How much does a central heating system cost in France?

Central heating systems in France may be powered by electricity, gas, oil, solid fuel (usually wood) or even solar power (see below). According to the Ministry for Industry, 100KWh of heating costs around EUR11 using electricity, EUR4.25 using natural gas, EUR8 using bottled gas and EUR6.50 using oil.

Can a solar power system be used in France?

A solar power system can be used to supply all your energy needs, although in France it's usually combined with an electric or gas heating system, as solar power cannot usually be relied upon year-round for heating and hot water.

Is electric central heating a good option in France?

Electric central heating is the most common form in France, particularly in modern homes with good insulation and a permanent system of ventilation, and is inexpensive to run using off-peak storage heaters. However, electric central heating isn't recommended for old properties with poor insulation.

Do you need a heating system in France?

Whatever form of heating you use, it's essential to have good insulation, without which up to 60 per cent of heating is lost through the walls and roof. Insulation is given a high priority in France, particularly in new homes. Some 65 per cent of French homes have central heating, which is essential if you wish to let your home during winter.

Do French homes have central heating?

Some 65 per cent of French homes have central heating, which is essential if you wish to let your home during winter. Many people keep their central heating on a low setting (which can be controlled via a master thermostat) during short absences in winter to prevent pipes from freezing.

Do you need air-conditioning in France?

In some regions of France, summer temperatures are often above 30C (86F) and, although properties are usually built to withstand the heat, you may wish to install air-conditioning (climatisation). Note, however, that there can be negative effects if you suffer from asthma or respiratory problems.
