

Grenada Generator Station Design

What are the station service power requirements for combustion engine generating plants?

Station service power requirements for combustion turbine and internal combustion engine generating plants are such that 208 or 480 volts will be used. 1.1.4 DISTRIBUTION SYSTEM. The primary distribution system with central in-house generation should be selected in accordance with the owner's requirements. 1.2.1 GENERAL.

What size generator should a power plant have?

Generators for a power plant serving an installation will be in the range from 4160 volts to 13.8 kV to suit the size of the unit and primary distribution system voltage. Generators in this size range will be offered by the manufacturer in accordance with its design, and it would be difficult and expensive to get a different voltage rating.

What type of generator is used for gas turbine service?

Generators for gas turbine service are revolving field, nonsalient or salient pole, self-ventilated, open drip-proof type, sometimes connected through a gear reducer, depending on manufacturer's gas turbine design speed, to the gas turbine power takeoff shaft.

How to install a gas turbine generator?

For gas turbine generator installations the connections from the generator to the side wall or roof of the gas turbine generator enclosure will have been made by the manufacturer in segregated phase bus configuration. The three-phase conductors will be flat copper bus, either in single or multiple conductor per phase pattern.

What is the connection between a generator and a switchgear bus?

Connections between the generator and switchgear bus where distribution is at generator voltage, and between generator and step up transformer where distribution is at 34.5 kV and higher, will be by means of cable or bus duct.

How are generator ratings selected for gas turbine generating units?

c) Generator ratings for gas turbine generating units are selected in accordance with ANSI Standards which require the generator rating to be the base capacity which, in turn, must be equal to or greater than the base rating of the turbine over a specified range of inlet temperatures.
