

High frequency uninterruptible power supply battery

What is an uninterruptible power supply (UPS)?

Uninterruptible power supplies (UPSs) deliver clean, conditioned, and reliable power to critical loads such as communication systems, network servers, medical equipment, etc. . Typically, the UPS provides unity power factor, high efficiency, high reliability, low cost, and continuous power supply, irrespective of the grid conditions [2,3,4].

What is a high-frequency isolated online UPS system for low power applications?

This paper proposes a high-frequency isolated online UPS system for low power applications. The proposed UPS consists of a single-stage AC-DC converter, boost DC-DC converter, and an inverter. The single-stage AC-DC converter provides galvanic isolation, input power factor correction, and continuous conduction of both input and output current.

What is a single phase high-frequency transformer isolated online UPS?

Conclusions A single phase high-frequency transformer isolated online UPS has been proposed in this paper. A single-stage AC-DC converter provides galvanic isolation, efficient power conversion, and excellent power factor correction. Besides, the AC-DC converter also charges the battery bank of the UPS system during grid mode of operation.

What is a high-frequency transformer based UPS?

High-frequency transformer-based UPSs offer an effective solution to the problems mentioned above by reducing the size of the system as well as providing suitable galvanic isolation between the load and grid.

What is the battery backup capacity?

Battery backup capacities range from 350 VA to 50,000 VA. Key features include sine wave output, energy-saving Green Power design, data-line protection, and free power management software.

What is a transient effect in a UPS system?

The transient effect in the output voltage is very small and the UPS system provides uninterruptible power to the load as shown in Figure 10 a. Similarly, the transition from battery mode back to grid mode upon the restoration of the grid power is shown in Figure 10 b. There is a small transient at the turning ON point of the AC-DC converter.

High frequency UPS: High frequency UPS is usually composed of IGBT high frequency rectifier, battery converter, inverter and bypass. The IGBT can control its opening and closing by adding control to the gate. The switching frequency of the IGBT rectifier is usually from thousands of Hz to tens of kHz (even up to a hundred kHz) relative to the 50Hz frequency that is far higher than ...
