

High power inverter parallel

Why do inverters need to be paralleled?

Inverters are often paralleled to construct power systems in order to improve performance or to achieve a high system rating. Parallel operation of inverters offers also higher reliability over a single centralized source because in case one inverter fails the remained (n - 1) modules can deliver the needed power to the load.

What is a parallel multi-inverter IPT system?

Therefore, the parallel multi-inverter IPT system can be set up with a compensation network to regulate the output power of each parallel inverter. Thus, even two inverters with different output powers can be used directly in parallel. This has a positive significance for IPT systems.

Can a parallel inverter output a different power level?

Therefore, in the actual system design, each of the parallel inverters can be set to output a different power through each of the compensation inductors. Thus, even two inverters of different power levels can be used in parallel.

What is a high power inverter?

In the context of PV power plants, the "high-power" classification for multilevel inverters usually applies to systems operating in the MW range, incorporating medium voltage levels of 2.3-13.8 kV to optimize energy transmission efficiency and support reliable system performance .

What is parallel multi-inverter topology?

When compared to a single high-frequency inverter, the proposed parallel multi-inverter topology can upgrade the power level with low-cost semiconductor devices in an IPT system. This topology allows each of the parallel inverters to output different powers to achieve power expansion, and suppresses circulating current.

What is the output power ratio of a parallel inverter?

Results obtained with the experimental system demonstrate that the output power ratio for each of the parallel inverters is about 1:2 and all of them achieve ZVS. In addition, the maximum efficiency of the DC-DC system is measured to be 92.53%, while the circulating current amplitude is only 0.2 A.
