How long does a server power supply last?

A server power supply can last around 3-5 years on average, but it's important to consult with the manufacturer's specifications and perform regular maintenance to prolong the lifespan of the power supplies. Similarly, a power supply used in a vehicle may have a shorter lifespan due to the harsh environment and continuous usage.

What factors affect the lifespan of a power supply?

The quality of the power supply is one of the most important factors that can affect its lifespan. A high-quality power supply will be made with better components and be more durable than a lower-quality power supply. This means that a high-quality power supply is more likely to last longer and be more reliable.
