How to connect energy storage power generation to the grid

Solar, battery storage, and wind energy account for 95% of all active capacity in the queues. The unprecedented volume of requests in queues points to significant shifts in the generation mix of the US power system but is also evidence of a significant structural and regulatory bottleneck for plants seeking grid connection.

Unlike concentrated generation based on fossil fuel or large hydro power plants, wind and solar generators are distributed along extensive areas and multiple locations. This requires expanding the grid to allow them to connect and to deliver the power in quantities needed, where and when it is needed.
