Will flow battery suppliers compete with metal alloy production to secure vanadium supply?

Traditionally, much of the global vanadium supply has been used to strengthen metal alloys such as steel. Because this vanadium application is still the leading driver for its production, it's possible that flow battery suppliers will also have to compete with metal alloy production to secure vanadium supply.

Do flow batteries have high volumetric energy density?

With respect to redox-targeting methods that only circulate redox mediators, several flow batteries using this concept have demonstrated unprecedentedly high volumetric energy densities (~ 500-670 Wh l<sup>-1</sup>; calculated from the density of the active materials) 72, 82, which are comparable to those in conventional LIBs.
