What is a commercial energy storage system?

Commercial energy storage systems can be used to store excess energy generated from on-site solar panels or wind turbines or to provide backup power during grid outages or emergency situations.

What is a C&I energy storage system?

A C&I (Commercial and Industrial) energy storage system is an energy storage solution designed for commercial and industrial applications, such as factories, office buildings, data centers, schools, and shopping centers.

What are energy storage solutions?

Our energy storage solutions are designed to ensure businesses will have power to meet their facility's critical power needs. For many companies the most significant portion of the electric bill are the demand charges which are based on the highest amount of power drawn during any 15-minute interval billing period.

What are the benefits of energy storage systems?

Systems can be designed for single, split or 3 phase electrical architecture and easily integrates with a broad selection of inverters and energy management systems. Improving energy resilience with an energy storage system that allows for critical loads backup. Saving money by reducing or eliminating utility peak demand charges.

Factories and industrial parks are major energy consumers with significant fluctuations and seasonal variability in electricity demand. C& I energy storage systems can charge and store energy during low-price periods and discharge during peak-price periods, achieving peak-valley arbitrage and reducing electricity costs for businesses.
