Critically, the specific power output of an ultracapacitor is nearly 10 times as high as batteries, enabling a high-power discharge in short periods. Storing energy in an electric field instead of chemicals also leads to increased safety, lower fire hazard and explosion risk, increasing the service life of the capacitor to between 10-15 years.

A supercapacitor's lifetime spans 10 to 20 years, and the capacity might reduce from 100% to 80% after 10 or so years. Thanks to their low equivalent series resistance (ESR), supercapacitors provide high power density and high load currents to achieve almost instant charge in seconds.

Supercapacitors are widely used due to their high-power density, that is, fast charge and discharge, and a huge number of charge/discharge cycles [5]. Increasing
