An uninterruptible power supply, or UPS for short, acts as an emergency back-up power source in the event of a power outage, giving you enough time to safely shut down computers, servers, and other devices. What's an Uninterruptible Power Supply? Put simply, you can think of an uninterruptible power supply as a big battery bank.

Programmable DC power supply is classified into "DC constant voltage power supplies" and "DC constant current power supplies" according to whether the output voltage or output current is stabilized. In general, the voltage and current in a power supply circuit will change as the load (resistance) changes, based on Ohm's law.
