What is an Uninterruptible Power System?

An uninterruptible power system (UPS) is a power supply system that provides uninterruptible power to a load by supplying power from a battery when the input power source or mains power fails. When a power failure occurs, the UPS can immediately take over the power supply and convert the direct current in the battery into alternating current, which is used to output and maintain the normal operation of various machines.

What is a UPS and how does it work?

A UPS (Uninterruptible Power Supply) is a battery backup power system that works by supplying power to your equipment for a short period when utility power fails. This helps prevent loss of data and minimizes the stress a hard shutdown causes on your electronic equipment.

What are the best UPS devices?
