How much power do you need for a camping trip?

For small, off-grid camping trips, you don't need much: A simple power pack or small solar panel can be more than enough! To calculate your maximum power output, start by making a list of all the devices you plan to use simultaneously during your camping trip.

How do I calculate my maximum power output during a camping trip?

To calculate your maximum power output, start by making a list of all the devices you plan to use simultaneously during your camping trip. For instance, you might want to charge your smartphone while powering a portable fan and a small LED light.

How many watts a power station can handle?

This ensures that your power station can handle the demand without overloading. For example, if your devices consume a total of 100 watts continuously and 190 watts at peak, opt for a power station with a maximum output of at least 250 watts to be on the safe side.

How much power do you need for a week-long trip?

If you have a daily power usage of 400 Wh, a week-long trip would need a power station with a capacity of at least 3000 Wh. But with a solar panel that can produce 300-500 Wh on a good day, a 1000 Wh power station should be sufficient as long as there is good weather!

How much power does a camping device use?

You can typically find this information on the device itself or in its user manual. Popular camping devices like LED lights, smartphones, and portable fans usually consume between 5-50 watts. In contrast, more power-hungry equipment like laptops, electric grills, and mini-refrigerators can consume up to 150 watts or more.

Should you bring a power station on a long trip?

Another big advantage is that you can bring a much smaller power station on longer trips. If you have a daily power usage of 400 Wh, a week-long trip would need a power station with a capacity of at least 3000 Wh.
