The climate of Reykjavik is subpolar oceanic, with cold winters and very cool summers. The city is the capital of Iceland and is located on the south-western coast. A short distance from the city we find the Esian volcano, 914 meters (2,999 ft) high and covered with snow for many months of the year.

They also develop due to the unequal heating of the Earth's surface, creating a vast temperature difference between two air masses. Jet streams circle the planet, mainly from west to east, but the flow often shifts to the north and south. The polar jets are the strongest jet streams that blow between about 30&#176;N and 50&#176; to 75&#176;N.

Seeing the Northern Lights in Iceland during summer is extremely unlikely. From May to August, Iceland experiences nearly 24 hours of daylight due to the Midnight Sun, leaving the sky too bright for the aurora to be visible. For the best chance to see the Northern Lights, visit between September and April, when nights are dark and long.

Further north we stop at V&#237;&#240;im&#253;ri to visit one of the few preserved turf churches in Iceland. The church was built in 1834 and has turf walls, but timber gables both back and front. Continue along a high mountain road to Akureyri, also called the capital of North Iceland, where you stay for two nights. Meals 1 Breakfast 1 Dinner Accommodation

I recently visited Iceland as part of an "astronaut training boot camp", organised by the incredible people from space media and experiences company Space Nation. We got several missions to complete that are similar to the training missions in the "Navigator App" and for that, we got dressed head-to-toe in 66 Degrees North clothing, Iceland's oldest outdoor clothing brand.

Here, you'll find natural bathing in pale blue water in the shadow of a power station. An entire Blue Lagoon industry has grown around this attraction since it first became a hit with locals in 1976. The water from the underground ...
