What is an uninterruptible power supply (UPS) system?

Rapid load changes by aggressive loads, such as the drawworks. AKA's uninterruptible power supply (UPS) system is able to limit the effect of these disturbances, so that output power remains stable and available for any equipment powered from the UPS system. Typical vessel UPS systems suffer from two critical weaknesses in the design.

What is a redundant power supply?

Redundant Power Supplies Each system is designed with N +1 redundancy. The failure of any single power supply unit will not affect the rated output capability of the UPS. Hot Swappable Power Supply Units Each power supply unit is hot-swappable, and each power supply unit is individually monitored.

How to choose an ups power supply?

The VA or watt rating of the power source is one of your most important considerations in choosing a UPS power supply. For single-phase deployments, it's wise to choose a UPS that exceeds the current input requirements, but also offers greater run times and allows for future expansion if necessary. 4. Availability and Battery Run Time

What do you need to make an uninterruptible power supply?

For prototypes, you need a soldering iron, copper-clad boards, wires, solder, flux, and the components listed later. For measurement, you need a multimeter, an oscilloscope, and a thermometer (or thermal camera). Step 1: What Is an Uninterruptible Power Supply?

What is a hot-swappable power supply?

Each power supply unit is hot-swappable, and each power supply unit is individually monitored. A failed rectifier unit can be replaced without interruption of the UPS output. Undisturbed Ride Through Technology The AKA UPS includes a distribution that provides undisturbed ride through capability to all loads.
