

Solar lights in home basements

Should I get solar tubes for my basement?

If you want to fully maximize natural lighting, reduce your dependence on artificial lighting, and make your basement extra bright, you might be interested in getting solar tubes. Solar tubes, otherwise known as light tubes, are structures installed on the roof to channel light down to a specific interior space.

How does natural lighting work in a basement?

Natural lighting is free and it gives this space a warm, relaxed feeling. Sun tubes, light tubes, or solar tubes are large reflective tubes that collect sunlight at the roof and send it down to the basement for low-intensity natural lighting. Sun tubes aren't true skylights, so direct sunlight rarely reaches the basement.

What is a sun tube in a basement?

A sun tube, also known as a light tube or solar tube, is a large reflective tube that collects sunlight at the roof and sends it down to the basement. This provides low-intensity natural lighting and can save money on artificial lighting during the day. Sun tubes aren't true skylights, so direct sunlight rarely reaches the basement.

What is the best lighting for a basement?

Recessed lighting is the best and most popular choice to illuminate a dark basement without much natural light. These lights take up minimal space in the ceiling and can illuminate the entire basement evenly.

What is basement lighting?

Basement lighting is a design element that involves adding artificial light to basements, which typically have less natural light than other parts of the home. Planning your basement lighting correctly is critical, as adding more lighting retroactively can be difficult and expensive.

How can you light up a basement?

You can light up your basement by placing floor lamps, installing ceiling lights like tray or recessed lighting, or using wall lighting such as sconces or faux natural light windows.

Low-profile solar tubes: Designed for locations with limitations on rooftop protrusions, low-profile configurations sit closer to the roofline. Their design helps maintain a clean appearance, but these solar tubes may not capture as much light as taller models. **Ventilated solar tubes:** These models combine daylighting and ventilation. They are ...
