It is a large-scale PV plant designed to produce bulk electrical power from solar radiation. The solar power plant uses solar energy to produce electrical power. Therefore, it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels.

What is solar power?

Solar power is the conversion of sunlight into electricity, either directly using photovoltaic (PV), or indirectly using concentrated solar power (CSP). The research has been underway since very beginning for the development of an affordable, in-exhaustive and clean solar energy technology for longer term benefits.

What is a solar PV system?

Solar PV is distinct from Solar Thermal and Concentrated Power Systems. Solar PV is designed to supply domestically usable power made possible by the use of photovoltaic. Photovoltaic (PV) as a process was first discovered in 1839 by Alexander Edmond Becquerel, while experimenting with a solid electrode in an electrolyte solution.
