

How does a PV inverter state machine work?

The inverter state machine then sequences to checking for DC voltage. To feed current into the grid the DC voltage (which in case of PV inverters is provided from the panel or panel plus some conditioning circuit), it must be greater than the peak of the AC voltage connected at the output of the inverter.

How does a grid tied PV inverter work?

A typical PV grid tied inverter uses a boost stage to boost the voltage from the PV panel such that the inverter can feed current into the grid. The DC bus of the inverter needs to be higher than the maximum grid voltage. Figure 20 illustrates a typical grid tied PV inverter using the macros present on the solar explorer kit. Figure 20.

Why are PV inverters so popular?

As PV systems need an electronic interface to be connected to the grid or standalone loads, the PV market has started appealing to many power electronics manufacturers. Improvements in design, technology and manufacturing of PV inverters, as well as cost reduction and high efficiency, are always the main objectives, [see References 1,2].

What makes a good inverter design?

High-efficiency, low THD, and intuitive software make this design attractive for engineers working on an inverter design for UPS and alternative energy applications such as PV inverters, grid storage, and micro grids. The hardware and software available with this reference design accelerate time to market.

How to control a PV inverter?

As shown earlier, the PV inverter control requires two real-time ISR's: one is for the closed loop control of the DC-DC stage and the other for the closed loop control of the DC-AC stage. The C2000 Solar Explorer Kit project makes use of the "C-background/C-ISR/ASM-ISR" framework.

How to control PV inverters with zero steady-state error?

Recently, new methods such as the PR (proportional resonant) current control method have been adopted to control the PV inverters with zero steady-state error and the possibility of selective harmonic compensation with low computational effort.
