The Simplest Power Supply: The LDO. One of the simplest forms of a power supply is the low dropout (LDO) regulator. LDOs are linear regulators as opposed to switching regulators. Linear regulators put a tunable resistor between the input voltage and the output voltage, which means the output voltage is fixed independent of how the input voltage ...

To avoid damage to the turbine, power production is limited to a maximum or rated value,  $P_r$ , which occurs at rated wind speed  $v_r$  &lt;  $v_{co}$ . Between  $v_{ci}$  and  $v_r$ , the power curve is non-linear, and the operation of the turbine is controlled to extract maximum power. Fig. 6 summarises the notional power curve. There is no power production in ...

The specific power consumption at the stack level ranges between 4.1 and 5.0 kWh N-m<sup>-3</sup> hydrogen, and decreases only slightly for a higher production rate. By contrast, the specific power consumption at the system level clearly varies with the production rate.
