What is a lithium iron phosphate battery?

Lithium iron phosphate (LFP) batteries use phosphate as the cathode material and a graphitic carbon electrode as the anode. LFP batteries have a long life cycle with good thermal stability and electrochemical performance. LFP battery cells have a nominal voltage of 3.2 volts, so connecting four of them in series results in a 12.8-volt battery.

As in their many other applications, lithium batteries are lightweight, have a longer life span, and have a low self-discharge rate. They also offer an extended run time, size customization, and fast charging. Hence the popularity of large lithium-ion batteries for electric automobiles. Golf Carts and Trolleys
