The upper value (500V) indicated the maximum voltage not to be exceeded lest you risk damaging your inverter. The mid range value (370V) indicates a nice sweet spot voltage at which the MPPT ...

Inverters can be broadly classified into two types, voltage source and current source inverters. A voltage-fed inverter (VFI) or more generally a voltage-source inverter (VSI) is one in which the dc source has small or negligible impedance. The voltage at the input terminals is constant. A current-source inverter (CSI) is fed with

It is the voltage and current supplied by the inverter to the equipments. If an inverter operates with 100% efficiency, then the power requirement of the electrical items and power supplied by inverter is same. But we
